SIDEWINDER™ LIFT TRUCK

The things you don't get for your money may be the best reasons to buy a SIDEWINDER Lift Truck.

The SIDEWINDER has:

- NO** motor brushes or commutators, with their associated fire risk and high maintenance.
- NO** grease fittings on its motor bearings – they are lubricated for life.
- NO** oil in its transmissions – they come filled with synthetic lubricant and are sealed for life.
- NO** pedals cluttering the floor – they would only create an impediment to access and egress, and add to operator discomfort and fatigue.
- NO** steering wheel, or its attendant pump, motor, valve, hoses, actuator, and their associated maintenance headaches.
- NO** shift lever to accidentally be left in gear, risking injury to the exiting operator, bystanders, or property.
- NO** parking brake lever – the parking brake engages automatically whenever the operator brings the truck to a stop.
- NO** long throw, high effort hydraulic valve levers to tire the operator – our proportional electro-hydraulic valve system gives the operator excellent control of all functions with low ergonomic impact.
- NO** problem keeping our cool – exhaust fans, and a duct system integral to the vehicle frame, aided by natural convection, combine to provide unsurpassed heat removal.
- NO** handedness – our traction and hydraulic joysticks can be reversed to provide equal drivability to all non-ambidextrous persons.
- NO** trouble seeing, or being seen – Our optional light packages enable the operator to be highly productive in a dimly lit work area, and the reflective striping option assures that you will be seen by others working in the area, adding to the safety of this extraordinary vehicle.
- NO** restraints to our freedom of movement – we move like we are floating on a cushion of AIR, all the while maintaining TRAX ion, to do finely controlled and useful work.

What you don't get with SIDEWINDER are maintenance problems.

What do you get for your money with SIDEWINDER is **MORE**.....

With the SIDEWINDER you get:

MORE *Power*

Four drive motors combine to provide maximum power to climb grades with heavy loads.

MORE *Traction*

With twice as many Drive Wheels as a conventional truck, the Airtrax Four Wheel Drive system makes the SIDEWINDER the most sure footed Lift Truck available today.

MORE *Braking*

With brakes on all four wheels the SIDEWINDER will hold on grades where others won't, and will stop even faster than you might expect.

MORE *Safety*

The Airtrax exclusive reflective striping option makes the SIDEWINDER visible when crossing paths with other vehicles, thereby reducing the chance of a collision.

MORE *Stability*

The inherently lower center of gravity of the SIDEWINDER means there is a reduced chance of roll over in turns or tipping with raised loads.

MORE *Maneuverability*

The Omni-Directional Mobility of the SIDEWINDER makes it unsurpassed for working in restricted areas, and gives it exceptional inching capabilities.

MORE *Productivity*

Because of the high motion efficiency of the SIDEWINDER in pallet pick and place operations, throughput sky rockets.

MORE *Comfort*

Adjustable arm rests, ergonomic control handles, soft touch knobs and push buttons, wide open floor space, and a three way adjustable suspension seat. It just doesn't get any better!

MORE *Control*

Infinitely variable proportional control of three axes of vehicle motion, and up to four hydraulic functions enable you to put the load right where you want it.

The Omni-Directional SIDEWINDER gives you MORE of what you buy a Lift Truck for!
